Do the people who maintain your plant's steam system really understand how to save you money?

The Mead O'Brien Steam Lab provides you a window into elements of the plant steam cycle as you observe live steam and condensate behavior in glass piping and glass-bodied steam traps under differing conditions. You will gain useful knowledge regarding:

- Steam generation
- Distribution
- Control & Heat transfer
- Heat Recovery opportunities
- Condensate removal & return

About Mead O'Brien

Mead O'Brien specializes in Application Engineering, in-house assemblies and skids, engineered design solutions, and system consulting, surveys, and assessments for:

- Steam & Hot Water products and systems
- Valve Automation & Control
- Measurement & Control Instrumentation
